## NEW LAWNS

Whatever method you used to install your lawn, consistent water and well-timed fertilization and weed control are essential for it to flourish.

Trust DeHamer Landscaping, after your new landscape is installed, to be with you in the early months as it develops and strengthens. This process can take 6–9 months based on soil, moisture and sun exposure. We will consult you on watering and provide the fertilization and weed control needed for your lawn to establish.

Once fully developed, it's just a matter of staying on a consistent fertilization and mowing schedule to keep it that way.

## LAWN CARE

Our mowing service allows you to take a “hands off” approach while still having a beautiful lawn to enjoy.

DeHamer Landscape will provide your fertilizer and weed control to ensure a green, weed free lawn without the hassle.

## FALL CLEANUP & SNOW REMOVAL

We will prepare your lawn and landscape for the winter with trimming and leaf removal to allow your landscape to flourish in the spring.

Allow DeHamer Landscaping to keep your driveway and sidewalks clear of snow so you can get where you need to go.
